**DECIDED THE PROCEDURE FOR SCIENTIFIC PEER REVIEW  
INTERNATIONAL JOURNAL OF NEW ECONOMICS AND SOCIAL SCIENCES (IJONESS)  
ISSN 2450-2146**

The procedure for reviewing of the article is an anonymous (double-blind review process). The reviewer does not know the author, the author is not familiar with the reviewer. If the reviewer assumes who is the author of the text and informs the editorial board about it. Then the editor changes the reviewer. A reviewer's change also occurs when the selected reviewer believes that he does not have the appropriate professional competence to evaluate the article.

**Stages of consideration of a scientific article:**

1. Formal assessment of the article. Criteria for evaluation at this stage include: the length of the article, information about the author / authors, the availability of the title, annotations and key words (in Polish, English and Russian), in the appropriate form of citations and references, the existence of a bibliography. If any of the technical criteria of the article are not complied with, then the article is sent back for the author with the relevant information about the missed / incorrect parts.
2. Removal by editors of any information about the identity of the author / authors.
3. A preliminary internal review of the content conducted by members of the editorial board, with the support of thematic editors working with the editorial staff.
4. The article is reviewed by at least two reviewers who are not affiliated persons of the author of the article. In doubtful cases, we reserve the right to appoint a third reviewer.
5. Inform the author / authors about the results of the review and familiarize with its content.
6. Making changes to the author's text and publishing the text.
7. Only scientific articles are subject to review. Book reviews, conference reports are not subject to review, and are subject only to a formal assessment.
